CHASE GREYSON

Perspectives on Arabic Linguistics XXX
 BRILL

This book studies the micro-variation in the syntax of negation of Southern Levantine, Gulf and Standard Arabic. By including new and recently published data that support key issues for the syntax of negation, the book challenges the standard parametric view that negation has a fixed parametrized position in syntactic structure. It particularly argues for a multi-locus analysis with syntactic, semantic, morphosyntactic and diachronic implications for the various structural

positions. Thus accounting for numerous word order restrictions, semantic ambiguities and pragmatic interpretations without complicating narrow syntax with special operations, configurations or constraints.

Grammaticalization of Arabic Prepositions and Subordinators Cambridge University Press

The revised and updated edition of *Modern Arabic* takes this authoritative, concise linguistic description of the structure and use of modern Arabic to an invaluable new level. Clive Holes traces the development of the Arabic language from Classical Arabic, the written language used in the 7th century for the Qur'an and poetry, through the increasingly symbiotic use of Modern Standard Arabic or MSA (the

language of writing and formal speech) and dialectal Arabic (the language of normal conversation). He shows how Arabic has been shaped over the centuries by migration, urbanization, and education--giving us "a balanced, dispassionate, and accurate picture of the structures, functions, and varieties of the contemporary Arabic language." Holes explains the structural characteristics--phonology, morphology, syntax, semantics, and lexical and stylistic developments--that the majority of the dialects share, as distinguished from Modern Standard Arabic. He also shows how native speakers use both types of Arabic for different purposes, with MSA being the language of power and control as used on television and in political

speeches, and the dialects serving as the language of intimacy and domesticity. He further shows how MSA and spoken dialects are not as compartmentalized as one might be led to believe. Modern Arabic illustrates the use of the Arabic language in real life, whether in conversation, news bulletins and newspaper articles, serious literature, or song. This new edition takes into account research published in several areas of Arabic linguistics since the first edition was published in 1995. It includes more extensive comment on the North African Arabic vocabulary of Modern Standard Arabic, more information about "mixed" varieties of written Arabic that are not in MSA (especially in Egypt), updated references, explanations, and many new examples. All Arabic is transcribed, except for an appendix presenting the Arabic alphabet and script. Students of the Arabic language will find Modern Arabic without peer--as will those general linguists who are interested in discovering how Arabic compares structurally and sociolinguistically with European languages.

Papers from the Annual Symposium on Arabic Linguistics. Volume XV: Salt Lake City 2001 Routledge

The empirical findings of this study establish that prepositions remain central to Arabic language users. It shows that they utilize them for construction of phrases, linked clauses, and organization of discourse, among other notable functions.

Tunisian and Libyan Arabic Dialects: Common Trends - Recent Developments - Diachronic Aspects

John Benjamins Publishing Company
This volume presents a selection of contributions from the week-long Cyprus Syntaxfest in 2006, which brought together research in syntax by several respected and prolific theoretical linguists from all over the world. During the six days of the Syntaxfest, work from a variety of viewpoints in modern generative grammar was presented, and the research discussed and debated followed diverse methodological paths, with the thematic focus on left peripheries in linguistic structures and (their) interface interpretation. The current collection of expanded versions of selected research presented at the Cyprus Syntaxfest reflects a wide variety of approaches to these topics; it also provides a glimpse of the rich sample of cross-linguistic data that informed the discussions of syntactic peripheries and their interface interpretation. It offers eleven studies on clausal and nominal left-peripheral phenomena and their (role in)

interpretation in a variety of typologically unrelated languages. More significantly, the contributions collected here underscore the by now established importance and theoretical interest of studying the edge of constituents, whether phasal or not. In every chapter, the blueprint of a general interpretive hierarchy driving and constraining syntax is also retraced throughout.

A Unified Analysis of Arabic Adnominal Markers Georgetown University Press
The Routledge Handbook of Arabic Linguistics introduces readers to the major facets of research on Arabic and of the linguistic situation in the Arabic-speaking world. The edited collection includes chapters from prominent experts on various fields of Arabic linguistics. The contributors provide overviews of the state of the art in their field and specifically focus on ideas and issues. Not simply an overview of the field, this handbook explores subjects in great depth and from multiple perspectives. In addition to the traditional areas of Arabic linguistics, the handbook covers computational approaches to Arabic, Arabic in the diaspora, neurolinguistic approaches to Arabic, and Arabic as a global language. *The Routledge Handbook of Arabic Linguistics* is a much-needed resource for researchers on Arabic and comparative linguistics, syntax, morphology, computational linguistics, psycholinguistics, sociolinguistics, and applied linguistics, and also for undergraduate and graduate students studying Arabic or linguistics.

Information Structure in Spoken Arabic Cambridge Scholars Publishing

This volume contains a selection of reviewed and revised papers from the twenty-first Annual Symposium on Arabic Linguistics, which was held on March 2-3, 2007, at Brigham Young University in Provo, Utah. The papers in this volume deal with a variety of topics in Arabic linguistics with a notable number of them emphasizing pragmatic aspects. The papers here included place a high value on the presentation of authentic data and explore different approaches in their analysis.

Concise Encyclopedia of Languages of the World Edinburgh University Press

Against the background of the past half century's typological and generative work on comparative syntax, this volume brings together 16 papers considering what we have learned and may still be able to learn about the nature and extent of syntactic variation. More specifically, it offers a multi-perspective critique of the Principles and Parameters approach to syntactic

variation, evaluating the merits and shortcomings of the pre-Minimalist phase of this enterprise and considering and illustrating the possibilities opened up by recent empirical and theoretical advances. Contributions focus on four central topics: firstly, the question of the locus of variation, whether the attested variation may plausibly be understood in parametric terms and, if so, what form such parameters might take; secondly, the fate of one of the most prominent early parameters, the Null Subject Parameter; thirdly, the matter of parametric clusters more generally; and finally, acquisition issues.

Papers from the Twenty-first Annual Symposium on Arabic Linguistics, Provo, Utah, March 2007 John Benjamins Publishing

This tripartite volume with 18 contributions in English and French is dedicated to Tunisian and Libyan Arabic dialects which form part of the so-called Maghrebi or Western group of dialects. There are ten contributions that investigate aspects of Tunisian dialects, five contributions on Libyan dialects, and three comparative articles that go beyond the geographical and linguistic borders of Tunisia and Libya. The focus of "Tunisian and Libyan Arabic Dialects" is on linguistic aspects but a wider range of topics is also addressed, in particular questions regarding digital corpora and digital humanities. These foci and other subjects investigated, such as the syntactic studies and the presentation of recently gathered linguistic data, bear reference to the subtitle "Common Trends - Recent Developments - Diachronic Aspects".

Arabic Language and Linguistics Routledge

By analysing the folk stories and personal narratives of a cross-section of Palestinians, Sirhan offers a detailed study of how content and sociolinguistic variables affect a narrator's language use and linguistic behaviour. This book will be of interest to anyone engaged with narrative discourse, gender discourse, Arabic studies and linguistics.

Perspectives on Arabic Linguistics XXIV-XXV Georgetown University Press

A Linguistic History of Arabic presents a reconstruction of proto-Arabic by the methods of historical-comparative linguistics. It challenges the traditional conceptualization of an old, Classical language evolving into the contemporary Neo-Arabic dialects. Professor Owens combines established comparative linguistic methodology with a careful reading of the classical Arabic sources, such as the grammatical and exegetical traditions. He arrives at a richer and more

complex picture of early Arabic language history than is current today and in doing so establishes the basis for a comprehensive, linguistically-based understanding of the history of Arabic. The arguments are set out in a concise, case by case basis, making it accessible to students and scholars of Arabic and Islamic culture, as well as to those studying Arabic and historical linguistics.

A Descriptive Study of Phonology, Morphology and Syntax Georgetown University Press

This book explores speakers' intentions, and the structural and pragmatic resources they employ, in spoken Arabic – which is different in many essential respects from literary Arabic. Based on new empirical findings from across the Arabic world this book elucidates the many ways in which context and the goals and intentions of the speaker inform and constrain linguistic structure in spoken Arabic. This is the first book to provide an in-depth analysis of information structure in spoken Arabic, which is based on language as it is actually used, not on normatively-given grammar. Written by leading experts in Arabic linguistics, the studies evaluate the ways in which relevant parts of a message in spoken Arabic are encoded, highlighted or obscured. It covers a broad range of issues from across the Arabic-speaking world, including the discourse-sensitive properties of word order variation, the use of intonation for information focussing, the differential role of native Arabic and second languages to encode information in a codeswitching context, and the need for cultural contextualization to understand the role of "disinformation" structure. The studies combine a strong empirical basis with methodological and theoretical issues drawn from a number of different perspectives including pragmatic theory, language contact, instrumental prosodic analysis and (de-)grammaticalization theory. The introductory chapter embeds the project within the deeper Arabic grammatical tradition, as elaborated by the eleventh century grammarian Abdul Qahir al-Jurjani. This book provides an invaluable comprehensive introduction to an important, yet understudied, component of spoken Arabic.

Selected Papers from the 2006 Cyprus Syntaxfest Routledge

The first comparative study of the syntax of Arabic dialects, chosen for their distinction. Based upon natural language data recorded in Morocco, Egypt, Syria and Kuwait, this study takes an analytical approach, combining insights from

discourse analysis, language typology and pragmatics.

A Corpus-Based Study Georgetown University Press

An in-depth investigation of a kind of spoken Arabic where speakers combine features from standard Arabic and the vernacular, producing 'mixed styles' - which show certain patterns of distribution, but also variable usage across speakers. The framework represents a comparative sociolinguistic perspective. Structures, Functions and Varieties BRILL
Covering all aspects of the history of Arabic, the Arabic linguistic tradition, Arabic dialects, sociolinguistics and Arabic as a world language, this introductory guide is perfect for students of Arabic, Arabic historical linguistics and Arabic sociolinguistics. Concentrating on the difference between the two types of Arabic the classical standard language and the dialects Kees Versteegh charts the history and development of the Arabic language from its earliest beginnings to modern times. Students will gain a solid grounding in the structure of the language, its historical context and its use in various literary and non-literary genres, as well as an understanding of the role of Arabic as a cultural, religious and political world language. New for this edition: additional chapters on the structure of Arabic, Bilingualism and Arabic pidgins and creoles; a full explanation of the use of conventional Arabic transcription and IPA characters; an updated bibliography and all chapters have been revised and updated in light of recent research.

A Cultural and Linguistic Study

Cambridge University Press

This book provides system developers and researchers in natural language processing and computational linguistics with the necessary background information for working with the Arabic language. The goal is to introduce Arabic linguistic phenomena and review the state-of-the-art in Arabic processing. The book discusses Arabic script, phonology, orthography, morphology, syntax and semantics, with a final chapter on machine translation issues. The chapter sizes correspond more or less to what is linguistically distinctive about Arabic, with morphology getting the lion's share, followed by Arabic script. No previous knowledge of Arabic is needed. This book is designed for computer scientists and linguists alike. The focus of the book is on Modern Standard Arabic; however, notes on practical issues related to Arabic dialects and languages written in the Arabic script are presented in different chapters. Table of Contents: What is

"Arabic"? / Arabic Script / Arabic Phonology and Orthography / Arabic Morphology / Computational Morphology Tasks / Arabic Syntax / A Note on Arabic Semantics / A Note on Arabic and Machine Translation Micro-variation in Southern Levantine, Gulf and Standard Arabic John Benjamins Publishing

Demonstrates sentential negation within a Government and Binding framework, showing parallelism between negative and interrogative sentences.

Cambridge University Press

A guide to Arabic syntax covering a broad variety of topics including argument structure, negation, tense, agreement phenomena, and resumption. The discussion of each topic sums up the key research results and provides new points of departure for further research.

Perspectives on Arabic Linguistics

Springer Science & Business Media

Morphemes combined with the Arabic noun exhibit many puzzling properties, still unaccounted for in the literature. This book proposes a new, unified explanation, analyzing these morphemes as copulae, with the constructions in which they occur as instances of predication

The Spoken Arabic of Basra John Benjamins Publishing

This book explores speakers' intentions, and the structural and pragmatic resources they employ, in spoken Arabic – which is different in many essential respects from literary Arabic. Based on new empirical findings from across the Arabic world this book elucidates the many ways in which context and the goals and intentions of the speaker inform and constrain linguistic structure in spoken Arabic. This is the first book to provide an in-depth analysis of information structure in spoken Arabic, which is based on language as it is actually used, not on normatively-given grammar. Written by leading experts in Arabic linguistics, the studies evaluate the ways in which relevant parts of a message in spoken Arabic are encoded, highlighted or obscured. It covers a broad range of issues from across the Arabic-speaking world, including the discourse-sensitive properties of word order variation, the use of intonation for information focussing, the differential role of native Arabic and second languages to encode information in a codeswitching context, and the need for cultural contextualization to understand the role of "disinformation" structure. The studies combine a strong empirical basis with methodological and theoretical issues drawn from a number of different perspectives including pragmatic theory, language contact, instrumental

prosodic analysis and (de-)grammaticalization theory. The introductory chapter embeds the project within the deeper Arabic grammatical tradition, as elaborated by the eleventh century grammarian Abdul Qahir al-Jurjani. This book provides an invaluable

comprehensive introduction to an important, yet understudied, component of spoken Arabic.

The Spoken Arabic of Başra, Iraq
Springer

This volume includes nine papers selected from the Fifteenth Annual Symposium on

Arabic Linguistics. Four of the papers deal with the area of corpus linguistics (new for this series), including papers from both a computational and a variationist point of view. The other papers deal with Syntax, and with various aspects of Arabic Sociolinguistics.
