"This book presents a practical, design-office approach to designing structural steel buildings. It covers topics not traditionally treated in steel design books, including the conceptual design of roof and floor decks, open web steel joists, and hollow structural steel trusses, the review of shop

drawings, and an introduction to seismic design of steel structures. The book considers steel design within the context of the National Building Code of Canada, examining the entire structural system and the ways in which individual elements fit within the structural system as a whole.

Current design practice is demonstrated using worked examples."

PRESENTATION:

STAINLESS STEEL

ROLEX This book is about all stainless steel Rolex watches, both modern and vintage models. The stainless steel is an alloy, mainly composed of iron and carbon, which is resistant, shiny, but above all...

fashionable. A Rolex watch must work and perform even in the

most hostile environment. With the passing of time, the techniques of stainless steel production have continuously evolved. Therefore there are different types of steel which have been used by Rolex (i.e. Rolesium: a Rolex patent from 21 May 1932 to arrive today to 904L steel). Technical details, historical profiles, characteristics of all Rolex watches in stainless steel will satisfy your professional needs and will also represent a useful guide to invest in these watches.

TOPICS Between the topics of the book we can find: The whole Oyster line Push-Back case Rolex watches: those models with the snap on the case Chronographs: this chapter is divided in

two parts - chronographs with push-back case and chronographs with Oyster case The "Masters": the most complicated Rolex watches The military models: Rolex watches that were part of the equipment of different army soldiers. Between the models in this chapter: Submariners, Cosmographs, GMT-Master and Turn-O-Graphs. The Panerai Rolexes: those Panerai models with a Rolex movement. These watches achieved a very high value by Mario Paci. Comex: all Rolexes produced for Comex. Not only Submariner and Sea-Dweller but also Explorer and GMT-Master. Personalized dials: those Rolex watches with dials characterized by

different logos, such as logos of companies, countries, ministers, Rolex retailers and much more. Faded dials: those examples with turning color dial. The most relevant colors are brown, light green and cream. Rare and particular dials: Rolex watches with pulsometer, underline, albino, black out, cern, 3-6-9 dials Bamford: Rolex watches personalized by Bamford Watch Department It is an updated and complete edition which provides technical details, history, scrutinized descriptions, high quality images and updated prices of Rolexes in stainless steel. The book comes with the updated price list of all published watches.

John Wiley & Sons
Sponsored by the Structural Engineering Institute of ASCE; American Institute of Steel Construction, Inc. This report describes the properties of steel and the criteria used to select appropriate steels to serve the intended needs. It presents a detailed

evaluation of issues related to steel production, steel materials, design considerations, fabrication considerations, and service issues for structures whose major components are made from structural steel. Specific recommendations are made for how to deal with the large number of important factors that will affect the eventual performance of the completed structure.

This book provides the means for a better control and purposeful consideration of the design of Architecturally Exposed Structural Steel (AESS). It deploys a detailed categorization of AESS and its uses according to design context, building typology and visual exposure. In a

rare combination, this approach makes high quality benchmarks compatible with economies in terms of material use, fabrication methods, workforce and cost. Building with exposed steel has become more and more popular worldwide, also as advances in fire safety technology have permitted its use for building tasks under stringent fire regulations. On her background of long standing as a teacher in architectural steel design affiliated with many institutions, the author ranks among the world's best scholars on this topic. Among the fields covered by the extensive approach of this book are the characteristics of the various categories of

AESS, the interrelatedness of design, fabrication and erection of the steel structures, issues of coating and protection (including corrosion and fire protection), special materials like weathering steel and stainless steel, the member choices and a connection design checklist. The description draws on many international examples from advanced contemporary architecture, all visited and photographed by the author, among which figure buildings like the Amgen Helix Bridge in Seattle, the Shard Observation Level in London, the New York Times Building and the Arganquela Footbridge. "This book looks to cover the differences the new professional will encounter as he takes on his new position overseas". The book not only covers the basic technical translations of the items likely to be encountered during your work, but also covers what I would call the "unspoken word" These are cultural differences, such as technical

phrases, modern work concepts terminology, standard practices. The book takes the student through all stages of construction and explains in detail the principal phases that the student is expected to understand & know in the new Hi tech and fast changing environment. It will be a good reference book which will enable the student to rapidly adapt to their new environment by helping them understand the basic principles, working practices, descriptions etc which some countries will take for granted. The Essential Guide to Western Civilization

Lucasbooks

Describes techniques for designing machine components and for selecting steels that can improve manufacturing profitability, thus bridging the gap between metallurgical theory and real-world applications in the U.S. steel industry. Uses shop language and practical examples to show how to economically design and produce components while minimizing distortion and cracks during heat treatment. Includes interrelationship of a part's shape and the ease of heat treatment with minimum distortion; also includes heat treatments that require minimum supervision

and inspection for distortion and defects. Steel terms and pricing methods are fully explained emphasizing the economic and processing advantages of boron. Plus, an appendix describes the three most useful methods for calculating steel hardenability and provides data on mechanical properties, dimensional tolerances, and hardenability for most commonly specified constructional steels.

'A very useful book for all involved in the task of hiring high-potential talent' - Azim Premji, Chairman, Wipro Ltd
Qualification, experience, competence and personality -how should a manager

weigh these while recruiting? Does it pay to take on a 'star' performer? What, indeed, is the secret of good hiring? There's no organizational process more important than recruitment. However, traditional resume- and interview-based hiring often does not account for the most important factor: personality. But what individual traits must one measure, and how? Skilled interviewers know that the trick lies in not just asking questions that challenge the candidate, but in figuring out whether his or her answer reveals a fit between the company's expectations and the personality of the interviewee. In Don't

Hire the Best, Abhijit Bhaduri brings his vast experience in leading HR teams at Wipro, Microsoft, PepsiCo, Colgate and Tata Steel to answer these and related questions on hiring judiciously. Bhaduri particularly underlines here the difference between hiring the right fit vis-a-vis hiring the "best". He includes case studies ranging from entrepreneurial start-ups with barely a handful of people in leadership roles to large global organizations, and provides a comprehensive guide on how to balance the person, the role and the company culture - the only way to appoint people who will be successful.
